

Talk Turn Tagging Instructions

Hi folks:

I'm going to send you four different excel files. Each file will contain patient language from a session in which a particular symptom was discussed, 1) Anger, 2) Anxiety, 3) Depression, and 4) Low Self-Esteem, and 5) Suicidal ideation or behavior.

In each excel file there will be approximately 200 patient statements/questions.

Next to each utterance there will be a column "code". For each utterance please answer the following question and enter your response in the "code" column. (anchors below).

Thanks for agreeing to help me with this little task. I don't believe any one file will take longer than an hour.

Cheers,

-zac

For each statement, please rate how typical or representative the statement is of that particular symptom (i.e., was the patient talking about that symptom).

1 = atypical / unrepresentative

2

3

4 = neutral

5

6

7 = very typical / representative
